17-year-old Florida teenager is accused of perpetrating one of the year's biggest and most high-profile hacks: Twitter.

A federal 30-count indictment filed in Tampa said Graham Ivan Clark used a phone spearphishing attack to pivot through multiple layers of passed its two-factor authentication to gain

hours.

It was, by all accounts, a sophisticated attack that required technical skills and an ability to trick and deceive to pull off the scam. Some security professionals were impressed, [comparing](#) the attack to one that had the finesse and professionalism of a well-resourced nation-state attacker.

But [a profile in The New York Times](#) describes Clark as an “adept scammer with an explosive temper.”

In the teenager’s defense, the attack could have been much worse. Instead of pushing a scam that promised to “double your money,” Clark and his compatriots could have wreaked havoc. In 2013, hackers [hijacked](#) the Associated Press’ Twitter account and tweeted a fake bomb attack on the White House, sending the markets plummeting — only to quickly recover after the all-clear was given.

But with control of some of the world’s most popular **Twitter** ⁱ accounts, Clark was for a few hours in July one of the most powerful people in the world. If found guilty, the teenager could spend his better years behind bars.

Here’s more from the past week.
